Training Courses Curriculum – First Semester 2025

About the Electronic Computer Center

The actual need to enhance capabilities and skills in the field of computers and information technology for university staff, government institutions, and the private sector is a priority. The Center aims to build an active e-government system that overcomes the disadvantages of paper-based processes.

Mission:

The Center seeks to involve all university employees in mandatory training courses, qualifying them in computer usage and information systems to efficiently deal with databases, electronic systems, and the internet. It also provides technical and advisory support to state institutions by developing and marketing electronic systems and databases according to each institution's requirements.

Objectives:

1. Develop skills and capabilities of staff for better use of databases and electronic systems.
2. Support the transformation of traditional learning into e-learning according to UNESCO standards.
3. Collaborate with state institutions and the private sector to improve competencies and provide electronic systems.
4. Design and implement specialized systems for university departments to support digital transformation.
5. Provide general and specialized computer courses.
